

FUJIFILM Business Innovation Make your business more efficient with better cost management with

Robotic Process Automation (RPA)

Business Challenge from Digital Transformation

Corporate Challenges and Digital Transformation Changes At present, everything drives and changes with speed especially in business competition. The company which can do it first or do it faster will become the winner of the competition. The working process of each company needs to be efficient, fast, accurate and can work continuously. However, the current working conditions forces us to encounter such the following problems.

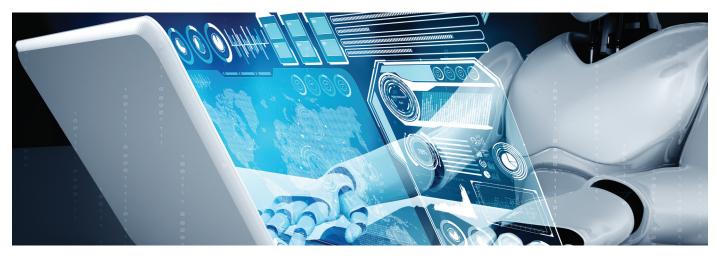

Optimize the work process to speed many times higher and be able to work 24/7 without any errors.

Employees can increase the value of the organization by focusing on works that actually make results or make more productivity without wasting normal working time.

Help to process information from multiple systems for quick and accurate decision makings.

The form of work that is suitable for bringing RPA to help improve work efficiency. Sample RPA use case 1 : Sales Order Process

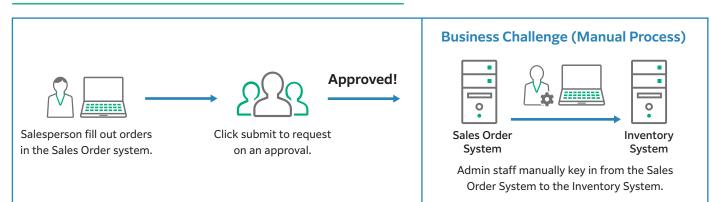

Examples of how to create new sales order in the Sales Order System and connect to the Inventory System.

(ERP 1) Sales Order System To be used for creating new Sales Order and requested on approvals according to the process.

(ERP2) Oracle - Inventory System A database management system used for filling sales orders has been approved.

The ex-work process before using RPA technology

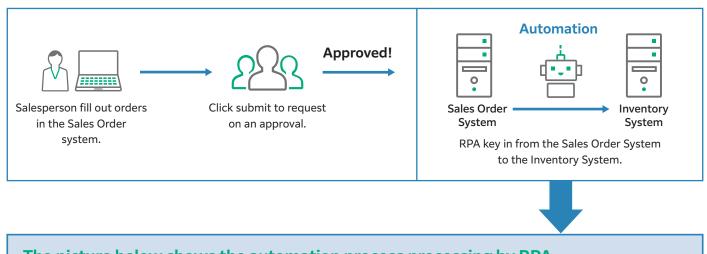

The picture below shows how the admin staff copy the data from the Sales Order System to the Inventory System.

1		, ,

Important Issues: • Employees need to manually key in the information. There is a long delay in the operation.

- It could have errors in the job.
- Wasting human resources in certain processes.

The new work process when using RPA technology.

Step 1 : RPA will log in to the sales order system and go to the Dashboard to see the work to be continued.

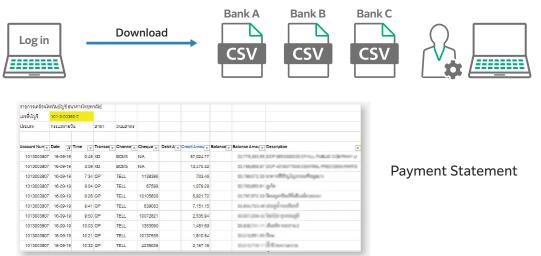

Step 2 : RPA will copy the data from the Sales Order System into the Inventory System and create the report when finish.

Sample RPA use case 2 : AR matching

Example of reconciling bank transfers to eliminate receivables in the ERP system.

The accounting staff will visit each bank's website and download the payment statement in CSV format.

Step 2

The accounting staff will match the information from the Payment Statement with the customer database files prepared one by one to specify the name of the customer who made the payment.

The amount that does not correspond to the Payment Statement is forwarded to the debt collection department to follow up on receivables.

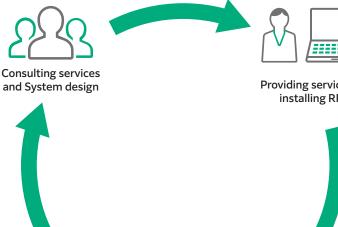

Important Issues: •

- There might be an error job.
- It takes a long time to operate this.

CashMatching

" We will provide services from the beginning of the process until the delivery of work to make assurance that customer will have a solution that can be used efficiently."
